

Title of dataset: Thomas A. Buck PhD thesis interview transcript data for study one and study three.

Contact details: t.buck@ucfb.ac.uk

Data Overview: The data included within the file contains transcripts from audio recordings from both study one and three from the author's PhD thesis. The data was collected through semi-structured interviews and were transcribed verbatim.

Data collection for study one transcripts: September 2017 – December 2017.

Data collection for three transcripts: September 2020 – January 2021.

Study one collected the data in person through face-to-face interviews and were audio recorded before being transcribed.

Study three collected the data through remote interviews which were conducted via Zoom or Microsoft Teams. The interviews were audio recorded before being transcribed.

All participant data has been anonymised and all responses from participants which may refer to any person, organisation or body have been anonymised either using a pseudonym or have been classified as [confidential] in the transcript. In some cases pseudonyms are used as names (e.g., John, Alex, Jane, etc.) or have used random initials assigned as the pseudonym (e.g., [MU], [RE], etc.) This was done to maintain participant anonymity and maintain confidentiality of all participant responses during the interviews.

Study One Key: Interviewer is listed as 'TB', and participants are defined by their participant number, E.g., Participant 1 is listed as '1', Participant 2 is listed as '2', Participant 3 is listed as '3', and Participant 4 is listed as '4'.

Study Three Key: Interviewer is defined by 'I' and Participants are defined by 'P'. Each respective transcript of the data from study three is labelled according to participant number, E.g., Participant 1 through to Participant 18. Each transcript is completed with the term, 'End of Interview' or 'Interview End'.

Permissions: Participants were informed through the participant information sheet (prior to consenting to participate) that the data would be used for completion of the author's PhD and would be disseminated via the PhD thesis, peer-reviewed journals, and open access repositories upon completion of the work. Once they had confirmed they had read the participant information sheet and were informed of the studies' purposes and the use of their data participants were asked to consent through signing a consent form. All participants present in this dataset have consented to participate in the study and for the data to be disseminated by the means listed above.
